It's the details that make the difference!

You may have seen the letters P.T.B. on the firewall of your vehicle. The markings have specific meanings. We've offered a brief explanation to the most commonly asked questions concerning the replacement of these markings. The key between a good restoration and a great restoration is how much detail is put into it. Enter your restored vehicle in the show of your choice and maintain complete originality by obtaining the correct inspection markings. The judges will be impressed!

Questions and Answers

- Q What does P.T.B. stand for?
A P.T.B. means P = Paint, T = Trim, B = Body.
 Q Do they go in any certain order?
A No. They can be mixed up in any way you like. PTB, TBP, BTP, TPB, etc.
 Q The most common way is PTB.
 Q Where do they go?
A PTB can be on either side of the firewall but the driver side is the most common. They have also been seen on the side of the cowl behind the fender but it would be useless to put them there since they can't be seen.
 Q What color should they be?
A They can be orange, light green, or a mixture of both. For example P=orange, T= light green, B=orange, or anyway you like. If your PTB is still intact before your restoration, do your new PTB's in the same colors. Not all vehicles included PTB's but when restoring yours we suggest you put them on.

Factory Inspection Marking Kits

Includes the correct P.T.B. stamps with specially formulated paint to give your vehicle the final inspection marks that the factory put on. Also included are the yellow and white crayons for marking your firewall with the factory inspection marks. A must for any true restoration.

Frame Engine and Body Marker

Automakers use these permanent markers to write codes and numbers on frames, engines and body components. Engine suffix codes were often written on the back of the cylinder heads. Job numbers were written on the firewall, frame, engine, and other components to assure the correct vehicle was being built according to the build sheet. These permanent paint markers will help you exactly duplicate the factory original marks.

OER® "Secret Formula" Clay Bar System

Heavy-duty for heavy oxidation clay pulls out all the contaminants you cannot see, but that you can definitely feel, like industrial fallout, rail dust, and brake dust. Though these contaminants are not visible, you can tell they are there because the paint will feel rough or gritty. These contaminants can cause patches of paint to appear dull, even after waxing. As these contaminants oxidize, they create rust spots within the paint. Once this happens, the oxidation is considerably harder to remove and will most likely take a good bit of paint with it. Clay will remove these contaminants and leave the surface silky smooth with a mirrorlike smooth finish. This clay will not break down or deteriorate like inferior low quality clay bars are prone to do. It is super elastic and will act as a magnet for foreign particles, literally pulling paint fouling from the paint. Clay lubricant is essential to the performance and lifespan of the clay. It provides the necessary slick surface for clay to glide on. Using low quality lubes or cheap detail sprays will deteriorate the bar faster and lead to poor performance.

OER® "Secret Formula" Acryli-Shine Glaze

Glaze is a polish without any cleaning properties used primarily to improve the shine and clarity of paint. Primarily used by body shops for finishing jobs or by detail shops to bring out the brilliance of paint, glazes are also commonly used on show vehicles to achieve a "high luster or wet look". It was developed for the darker finishes, using a slightly moisture formulation to enhance the difficult to wax paint finishes. The application process is forgiving, smooth, and dust free. Your moldings will not turn white. Glazes do not replace polishing. If a surface has minor swirls and imperfections, to achieve the best superior results, the surface should be polished with a polish first.

Convert Rust

OER® Convert Rust

OER® Chemical Restoration Convert Rust can be applied with a brush, trigger bottle, or a spray gun. Brush - A common household paint brush or foam applicator. Spray Gun - HVLP or conventional spray gun using a 1.0-1.4 nozzle at low pressure. Available in quart bottles.

RustSeal® Corrosion Barrier Coating

OER® Authorized RustSeal is a superior one part, ready to use, high solids content, rust preventive, corrosion barrier coating, that is actually hardened by exposure to moisture. It is impervious to road salts and most every chemical. RustSeal flows out to a beautiful, rock hard, tough ceramic-like coating that is tough to chip or scratch, and will not crack or peel. RustSeal is an incredible, single component, ready-to-use, high solids content, rust preventive coating with exceptional sealing properties. RustSeal is the most permanent cost effective solution for treating rust and corrosion anywhere where it is a problem: home, automotive, industry, fleet, farm, and more! RustSeal is an enhancement that lasts. Water and air are locked out, therefore oxidation, the precursor to rust, cannot take hold. RustSeal is not intended for use as a final finish. To protect against unwanted cosmetic changes, top coat RustSeal with any opaque (solid color) paint system. After removing or treating rust on floors, subframes, or other under vehicle components, RustSeal® Corrosion Barrier Coating works by isolating the surface from moisture and oxygen. This single component, high solids, rust stopping coating seals out the ultimate causes of rust, creating a rock hard non-porous barrier between the metal and rust promoting elements. Will not crack, chip, flake, or peel, and no hardeners or activators are needed. RustSeal® is completely unaffected by salt, gasoline, oils, battery acids, hydraulic fluids, solvents, chemicals, or corrosives.

BlackTop® Top Coat

BlackTop is a permanent, moisture cured, UV stable coating primarily used for top coating surfaces previously sealed with RustSeal® or any other paint/primer application. BlackTop is a high-performance protective coating specifically formulated to withstand dulling and fading caused by prolonged sunlight exposure. BlackTop may be used alone as a resilient coating or better the ultimate rust protection when used in combination with the RustSeal® corrosion barrier coating as step 1. For the best top rust and ultraviolet protection, first apply RustSeal to permanently seal the surface and then top coat with BlackTop for an incredibly tough and professional looking finish. Like RustSeal®, BlackTop dries to a rock hard yet flexible coating that can be readily applied to chassis, coil springs, and lightweight panels. BlackTop also has high heat resistance and can be applied to almost all automotive applications except exhaust systems. BlackTop is intended as a final finish for parts that have been coated with RustSeal®. BlackTop will retain its color and sheen even after repeated or prolonged exposure to direct UV light and will not degrade.

This high gloss clear coat remains permanently flexible and is able to perform in the toughest environments without yellowing, cracking, or peeling. Apply directly to painted surfaces with minimal surface prep. Incredibly tough and hard like no other clear coat on the market. Can be applied with a brush (without leaving any brush marks), roller and conventional spray gun. Unlike two part coatings, no hardener is needed with DiamondFinish®. Just stir and go. DiamondFinish® clear coat will cure without heat or UV lights in temperatures from 50 to 86 degrees Fahrenheit. Able to withstand the harshest of chemicals including fuels, solvents, battery acid, brake fluid, Ethanol, Methanol, MEK, Hydrochloric Acid, fertilizers, and Acetone. Graffiti resistant: because of its chemical resistance, graffiti just won't stick and can be removed simply with a solvent soaked rag. Great for high temperature automotive applications including the use on cylinder heads, engine blocks, brake components and even inlet manifolds, without yellowing up to 300 degree Fahrenheit.
